Reference: **Product Certification Statement**
Rooftop Mounted Mechanical Equipment
Fujitsu Outdoor HVAC Unit (Group 5)
Model Nos.: **AOUG09LMAS1; AOUG12LMAS1**

Based on the manufacturers cut sheets for the referenced rooftop equipment, I have performed a wind load analysis to determine compliance with wind load criteria set forth by 2017 Florida Building Code Mechanical Section 301.15, Florida Building Code Building Chapter 16 and ASCE 7-10. Analysis results demonstrate that the equipment without retrofit is structurally adequate to withstand wind loads at the specified mounting heights for Exposure Categories identified in Table 1. This wind certification includes anchorage of equipment with 5/16" diameter anchors at the four base mount locations. Anchor material strength shall meet or exceed ASTM A307 requirements. Specifications for anchor attachment to host structure and certification for structural adequacy of host support structure is not included and shall be done by others. For analysis results, refer to Summary of Results at the end of the structures report associated with this certification.
